Your Investment Performance

VIEW YOUR PERFORMANCE

In the table below and when you view charts, your personal rate of return is calculated with a time-weighted formula. The calculated value reflects the results of your investment allocations as well as any activity in the plan accounts shown. The personal rate of return is an estimate only and should not be used solely in making investment decisions. You cannot invest directly in a benchmark and benchmark returns may not be the same as the returns of the plan accounts. Remember that past performance does not guarantee a similar outcome. Please note that your Personal Rate of Return may be positively impacted by certain non-market-related adjustments including payments related to settlements and rollovers.

Please note: In this chart if a fund does not have 10 years of performance and is inception mid-month, fund performance starts at the inception date while benchmark and category average begin at the first full month of performance. Chart uses monthly performance returns which may not be available back to the product's inception date. The performance data featured represents past performance, which is no guarantee of future results. Investment return and principal value of an investment will fluctuate; therefore, you may have a gain or loss when you sell your shares. Current performance may be higher or lower than the performance data quoted.
